RSNA Press Release

RSNA 2020 Abstract Submissions Exceed 11,000

Released: May 5, 2020

OAK BROOK, Ill. (May 5, 2020) – The Radiological Society of North America (RSNA) received 11,039 scientific and educational abstract submissions for RSNA 2020, the Society’s 106th annual meeting. The volume and topical array of abstract submissions will provide RSNA 2020 meeting attendees with wide-ranging opportunities to learn at the world’s largest radiology conference, to be held Nov. 29-Dec. 4 in Chicago.

“In the midst of this pandemic, I was inspired to see more than 11,000 abstracts submitted,” said Matthew A. Mauro, M.D., RSNA Board Liaison for Education. “Clearly the radiology community is looking to RSNA, and to the RSNA annual meeting, as its anchor for learning and sharing science and education this year.”

The abstracts were submitted by researchers and educators from 75 countries, covering 17 subspecialties in radiology. The highest number of abstracts cover radiologic topics in Breast, Chest, Gastrointestinal, Musculoskeletal, Neuroradiology and Physics.

At this time, RSNA is proceeding with planning for RSNA 2020 in Chicago, optimistic that the COVID-19 outbreak will subside prior to that time. The Society is also enhancing its already successful virtual meeting by planning a program that can take place either in person or virtually.

“We proudly recognize that our attendees rely on the RSNA annual meeting as a source for the latest research, premier professional education and cutting-edge radiologic innovation,” said RSNA President James P. Borgstede, M.D. “Connecting medical imaging professionals from around the world is more important than ever during this time, and RSNA will do this in the best way possible.”

The RSNA Scientific Assembly and Annual Meeting is the premier meeting to present the best science, education and technologic innovation in medical imaging. RSNA 2020 registration opens July 22. For more information, visit RSNA.org/annual-meeting.

###

RSNA is an association of radiologists, radiation oncologists, medical physicists and related scientists promoting excellence in patient care and health care delivery through education, research and technologic innovation. The Society is based in Oak Brook, Ill. (RSNA.org)
